witness-SCM✓   A "Smart DVR" Empowering Supply Chain Management

As the pace of businesses accelerates, there is a corresponding need for improving supply chain managemment capabilities. Only witness-SCM✓ integrates and streamlines image capture, logging and reporting of critical events across the enterprise, from production to warehousing and transportation. The key to witness-SCM✓ "Smarts" lie in its ability to trigger or record on specific events. This event triggering is made possible through IRIS' own Phenomenon Programming. witness-SCM✓ empowers management with visibility of critical events, verifying contractual and regulatory requirements. It also provides unbiased perspective for those supply chain incidents that require collaboration to resolve, including issues of time, condition, content and irregularities. witness-SCM✓ extends management capabilities.

Event Triggered Recording of:

- Sub-assembly completion
- Finished product
- Inspection failure
- Process change over
- Packaging / kitting
- Out of specification product
- Abnormal processing sequence
- Transaction variances
- Irregularities
- Product condition at shipping / receiving

Visual Validation of:

- Manufacturing and Supply
- Warehouse Management
- Transportation Management
- Service Parts Management
- Track and Trace

Push Notification:

With witness-SCM✓, sensor data can be coordinated with image buffers to create a powerful view of the supply chain.
As product issues arise, witness-SCM✓ helps care for customers as well as the brand.

Products   **Processes**   **Transportation**   **Shipping / Receiving**
